

LSG Graese

LSG grease is a waterproof yellow colored lithium soap product containing rust and oxidation additives. Especially developed for roller lubrication, it can be used for chassis lubrication.

Usage

Used in rolling bearings, sliding bearings, central lubrication systems and general industrial applications. Especially developed for roller lubrication, it can be used for chassis lubrication.

Features

Wide Application Area: It provides economy by decrease the grease variety in multi-purposes applications of vehicle fleets and factories.
High Resistance to Rust and Corrosion: It provides high resistance to against the corrosion and rust.
Operating Performance at High Temperatures: It provides working performance between -20°C and +130°C.
Creating Buffer Oil Films: It generates buffer film for prolong bearing life in vibratory environment.

Technical Specifications

Soap Type	-	Lithium	Lithium
Colour	Visual	Yellow	Yellow
NLGI	-	2	3
*Dropping Point, °C	TS 5937 ISO 6299	190	190
Worked Penetration @25 °C	ASTM D 217	265-295	220-250
Operating Temperature, °C	-	-20 / +130	-20 / +130

**Data given above are typical properties and may vary slightly.*
