

Metal Mould Oil

This is a ready-to-use mould oil containing special additives, formulated for use with water-resistant metal molds.

Usage

It is used for lubricating metal concrete molds.

Features

Film Layer Creation Feature: It forms a thin film layer in the mold with low viscosity structure and prevents the concrete from adhering to the mold.

Creating a Smooth Surface Feature: It provides smooth concrete surfaces.

There Is No Mold Cleaning Problems: It removes the mold cleaning problem and allows it to be used again.

Lubricant Property: Due to the good lubrication properties, it prevents rusting of metal surfaces.

Long Mold Life: It increases mold productivity and life span.

Ease of Application: It is ready to use and simple to apply. On surfaces that are absorbing (wood, etc.), 1 liter of product can be lubricated up to approximately 15-20 m² and non-absorbent surfaces (steel, plastic etc.) with 1 liter of product can be surface oiled up to 35-40 m².

Technical Specifications

*Kinematic Viscosity @40 °C, cSt	ASTM D 445	18,14
*Kinematic Viscosity @100 °C, cSt	ASTM D 445	4,02

**Data given above are typical properties and may vary slightly.*
