

Aluminum Wire Drawing Oil

This is a wire drawing oil developed with high-quality base oils and special additives for aluminum wire drawing machines, used by forming an emulsion with water.

Usage

Used in aluminum wire drawing machine. In order to achieve a concentration of 5-10% is used by forming emulsions with water.

Features

High Performance Lubricants: It contains contributions due to lubrication function brings good way, rather than continuously.
Stable Emulsion Creation Feature: White color which does not stain aluminum is forming emulsions with oil forming and drawing.
Excellent Cooling Feature: It makes perfect cooling tasks in the wire drawing process with stable emulsions formed with water.
High-Performance Processing: Thanks to contributions within the system provides high precision machining performance.

Technical Specifications

*Kinematic Viscosity @40°C, cSt	ASTM D 445	55,81
*Kinematic Viscosity @100°C, cSt	ASTM D 445	8,86
pH (5% Concentration)	ASTM D 1287	8,8
Emulsion Type	-	Milky appearance

**Data given above are typical properties and may vary slightly.*
