

Rust Remover Spray

This formula is designed to remove rust from metal surfaces that have become stuck due to water and moisture damage.

Usage

It is used on all metal surfaces that are stuck due to rust caused by water and moisture. Primary applications include seized bolts and nuts, hand tools, hunting and fishing equipment, bicycles, motorcycles, door and cabinet hinges, and all similar metal parts. After removing rust, it forms a thin film layer on the surface, delaying future rusting.

Application:

- Shake well before use.
- Attach the red stick provided with the spray can to the actuator.
- Spray onto rusty surfaces from a distance of 10-20 cm.
- Allow it to penetrate and loosen the rust.
- For heavily rusted areas, repeat the process several times.

Features

Does not damage plastic surfaces.
Contains environmentally friendly, ozone-friendly propellant gas.

Technical Specifications

Physical Appearance	Visual	Aerosol
Color	Visual	Yellow
Refractive Index	ASTM D 1218	+30
Density @15°C, g/cm³	ASTM D 4052	0,8001 - 0,8501
Kinematic Viscosity @40°C, cSt	ASTM D 445	2-7
